## Constant

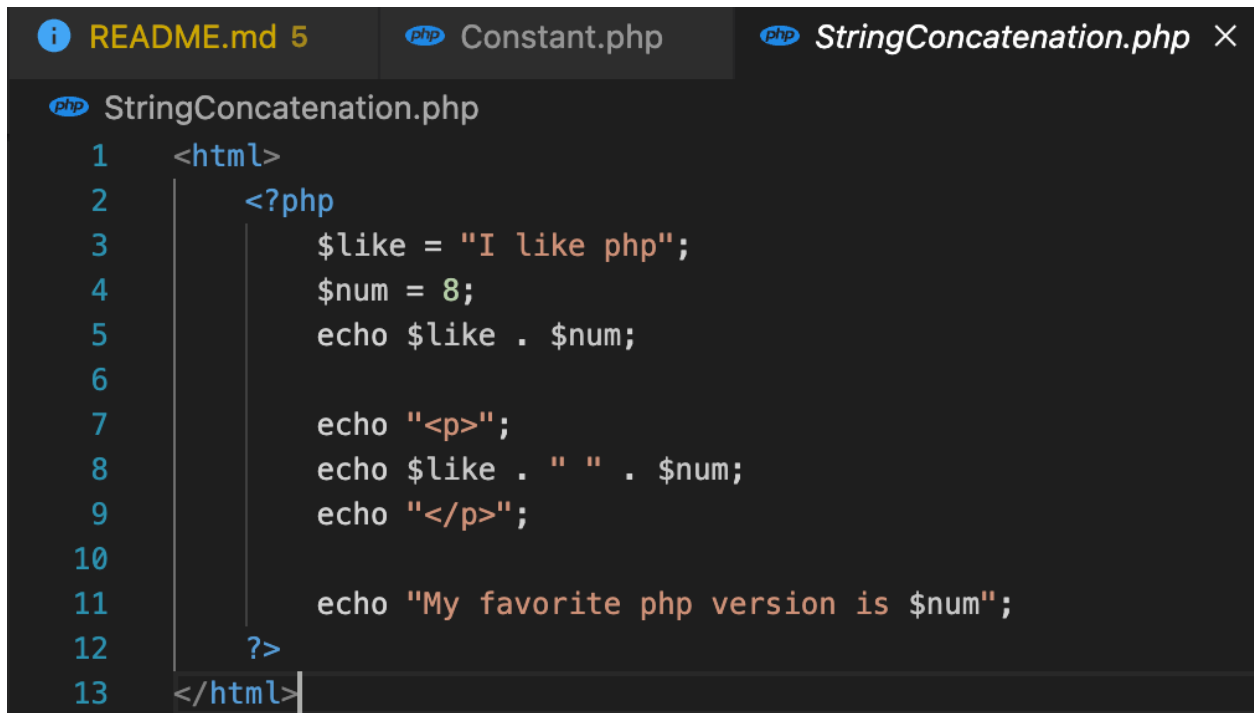

```
Constant.php
1  <html>
2  <?php
3      define("EMAIL", "dapravith@example.com");
4      echo EMAIL."<br>";
5
6      define("myCon", true);
7      if(myCon){
8          echo EMAIL."<br>";
9      }
10     define("ONECONSTANT", "some value");
11
12     define("CONSTANT", "Hello world.");
13     echo CONSTANT."<br>";
14 ?>
15
16 </html>
```

Result of Constant

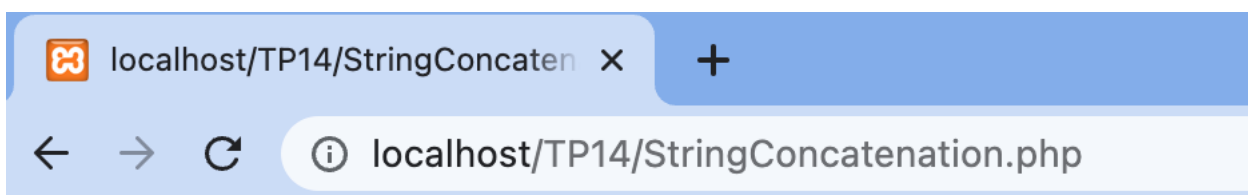

dapravith@example.com  
dapravith@example.com  
Hello world.

## String Concatenation

```
StringConcatenation.php
1  <html>
2      <?php
3          $like = "I like php";
4          $num = 8;
5          echo $like . $num;
6
7          echo "<p>";
8          echo $like . " " . $num;
9          echo "</p>";
10
11         echo "My favorite php version is $num";
12     ?>
13 </html>
```

## Result of String Concatenation

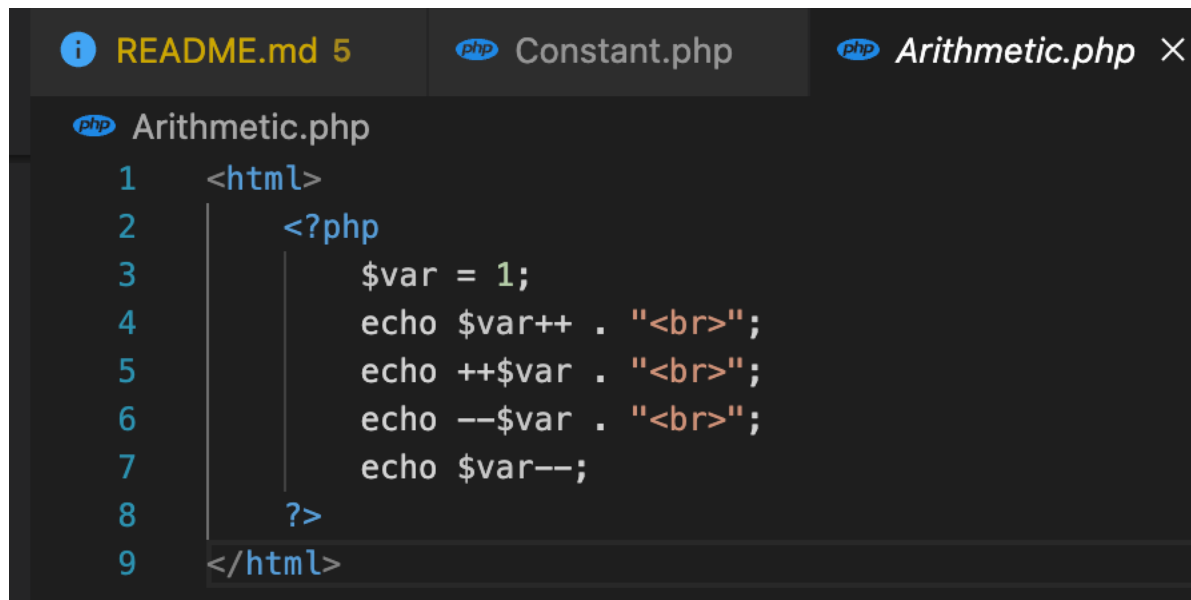

I like php8

I like php 8

My favorite php version is 8

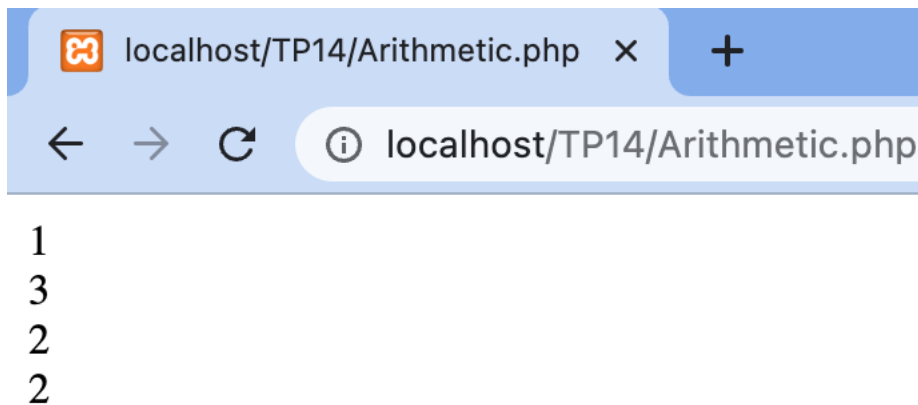

## Arithmetic

The screenshot shows a code editor with three tabs: README.md 5, Constant.php, and Arithmetic.php. The Arithmetic.php tab is active, displaying the following PHP code:

```
1 <html>
2     <?php
3         $var = 1;
4         echo $var++ . "<br>";
5         echo ++$var . "<br>";
6         echo --$var . "<br>";
7         echo $var--;
8     ?>
9 </html>
```

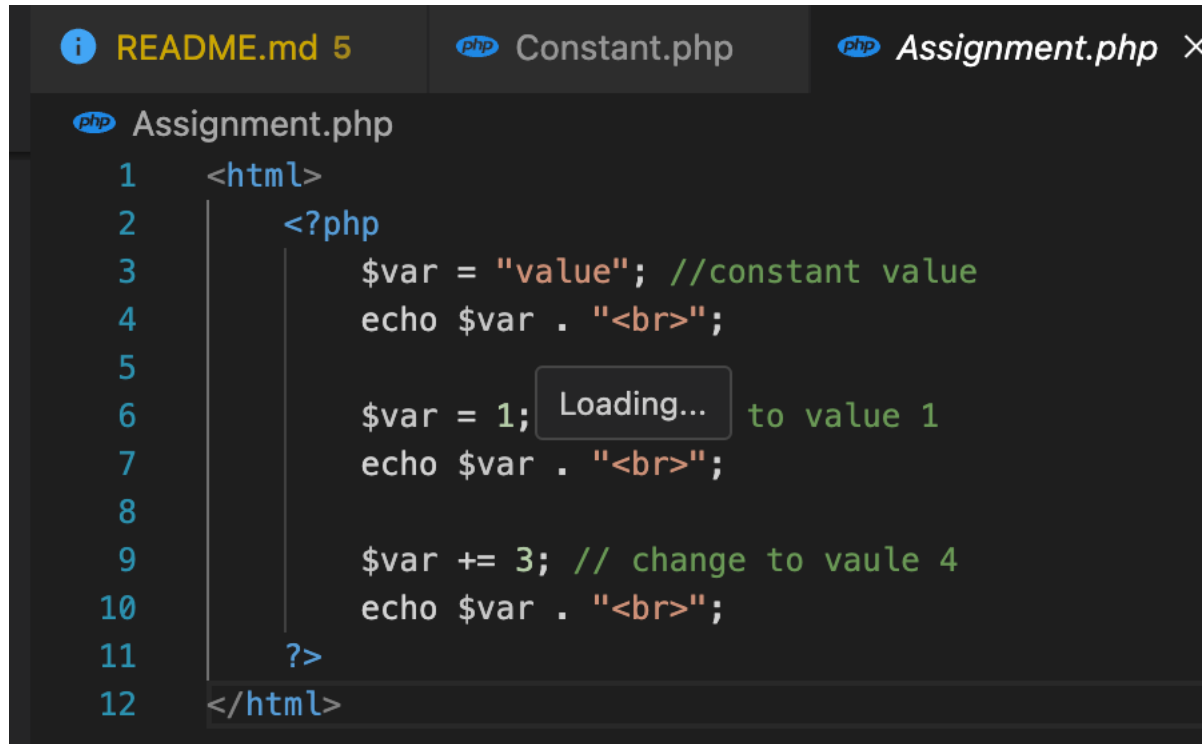

## Result of Arithmetic

The screenshot shows a web browser window with the address bar displaying localhost/TP14/Arithmetic.php. The output of the script is displayed below the address bar:

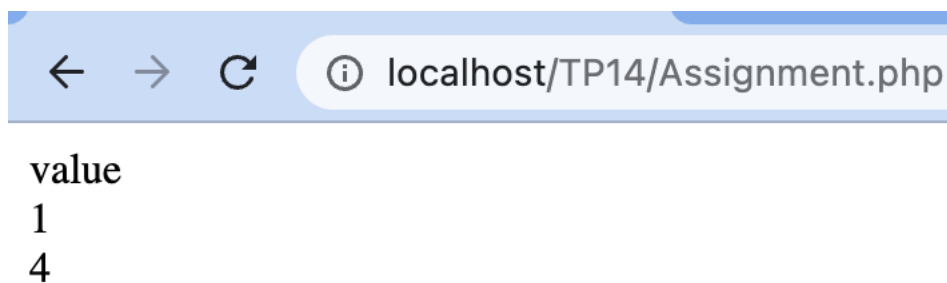

```
1
3
2
2
```

## Assignment

```
1 <html>
2     <?php
3         $var = "value"; //constant value
4         echo $var . "<br>";
5
6         $var = 1; Loading... to value 1
7         echo $var . "<br>";
8
9         $var += 3; // change to vaule 4
10        echo $var . "<br>";
11    ?>
12 </html>
```

## Result of Assignment

```
← → ↻ ⓘ localhost/TP14/Assignment.php

value
1
4
```

## Logical

```
Logical.php
1  <html>
2      <?php
3          $name = "Rotha";
4          $lastName = "Dapravith";
5          echo $name . " " . $lastName;
6          echo "<br><br>";
7          $a = "Hello";
8          $a .= " Rotha!";
9          echo $a;
10     ?>
11 </html>
```

## Result of Exercise5

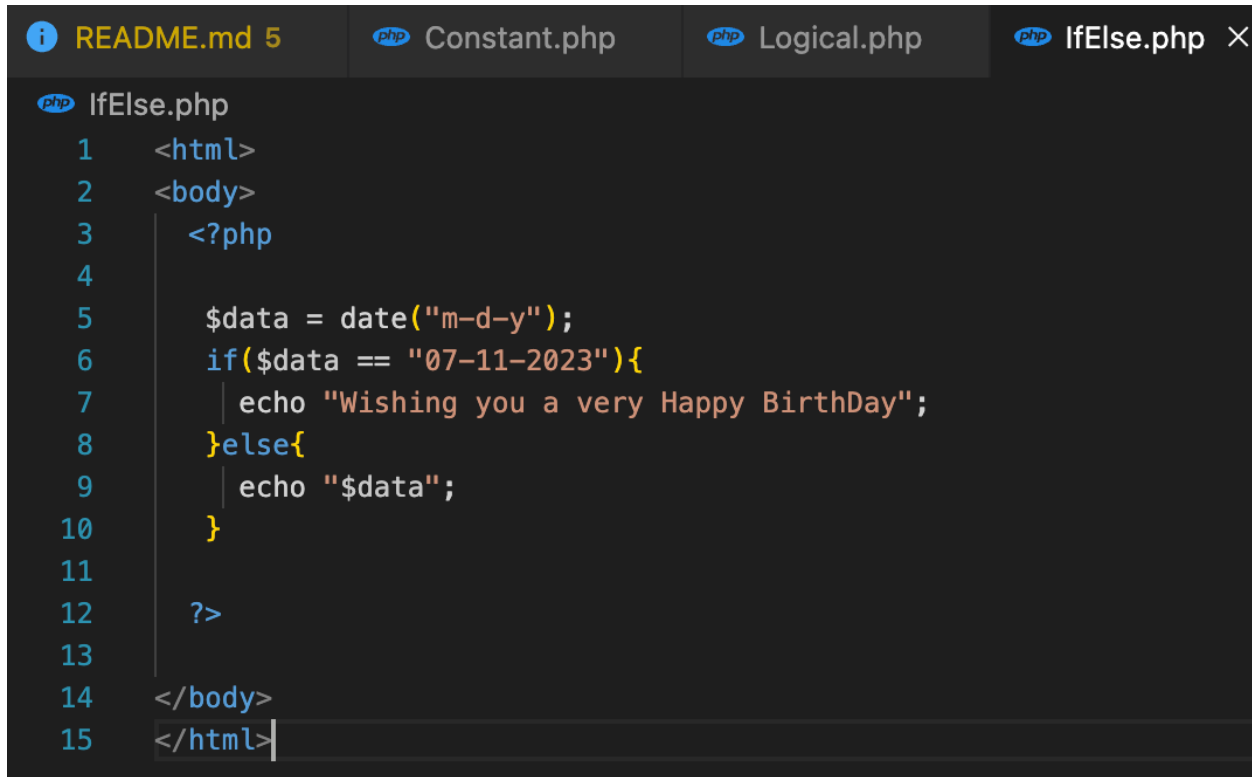

Rotha Dapravith

Hello Rotha!

## If Else Statement

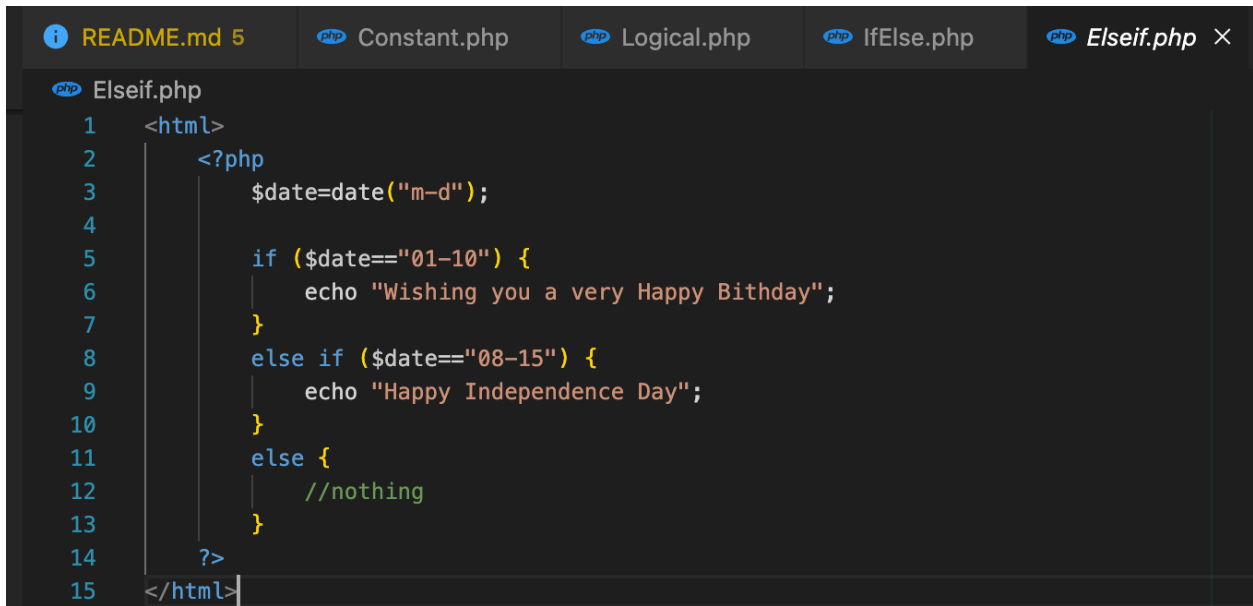

```
1 <html>
2 <body>
3   <?php
4
5     $data = date("m-d-y");
6     if($data == "07-11-2023"){
7       echo "Wishing you a very Happy Birthday";
8     }else{
9       echo "$data";
10    }
11
12  ?>
13
14 </body>
15 </html>
```

## Result of If Else Statement

07-11-23

## Elseif Statement

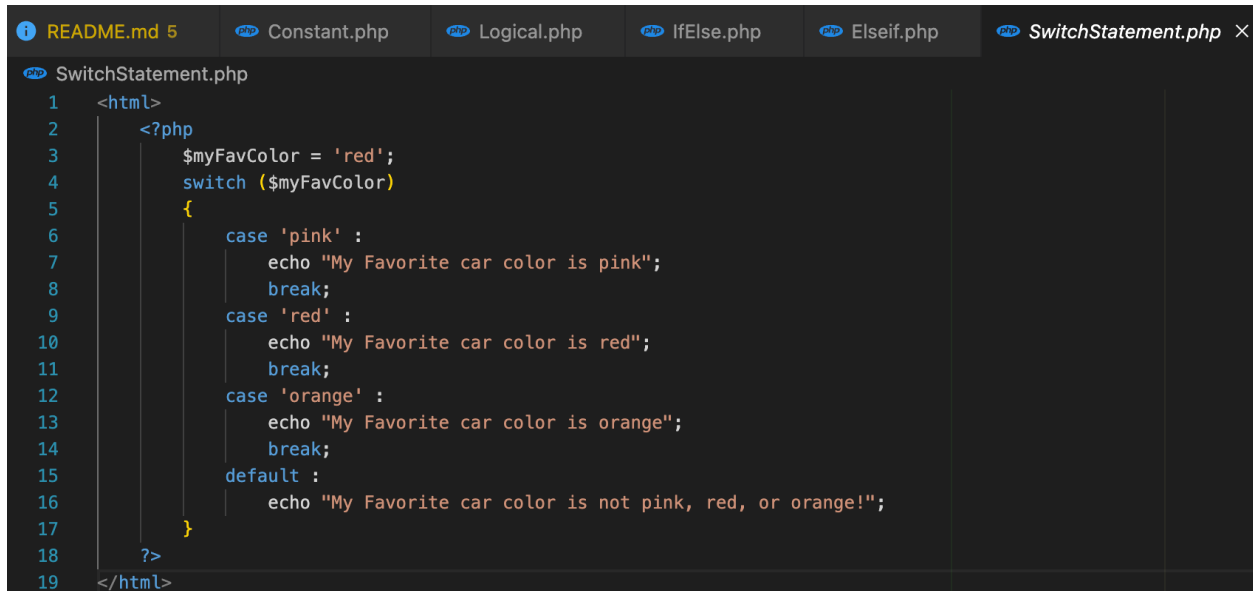

```
1 <html>
2 <?php
3     $date=date("m-d");
4
5     if ($date=="01-10") {
6         echo "Wishing you a very Happy Bithday";
7     }
8     elseif ($date=="08-15") {
9         echo "Happy Independence Day";
10    }
11    else {
12        //nothing
13    }
14 ?>
15 </html>
```

## Result of Elseif Statement

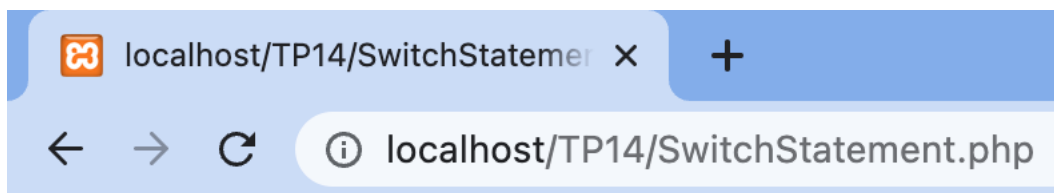

Happy Independence Day

## Switch Statement

```
SwitchStatement.php
1 <html>
2 <?php
3     $myFavColor = 'red';
4     switch ($myFavColor)
5     {
6         case 'pink' :
7             echo "My Favorite car color is pink";
8             break;
9         case 'red' :
10            echo "My Favorite car color is red";
11            break;
12        case 'orange' :
13            echo "My Favorite car color is orange";
14            break;
15        default :
16            echo "My Favorite car color is not pink, red, or orange!";
17    }
18 ?>
19 </html>
```

### Result of Switch Statement

My Favorite car color is red

## While loop

```
WhileLoop.php
1  <html>
2      <?php
3          $i = 1;
4
5          while ($i <= 5 ){
6              echo "Hellow while $i times" . "<br>";
7              $i++;
8          }
9      ?>
10 </html>
```

### Result of While loop

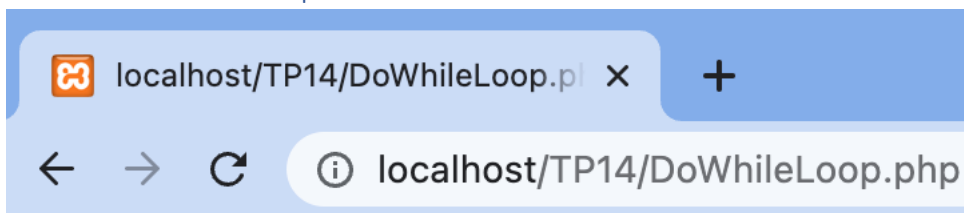

Hellow while 1 times  
Hellow while 2 times  
Hellow while 3 times  
Hellow while 4 times  
Hellow while 5 times

## Do-While loop

```
DoWhileLoop.php
1  <html>
2      <?php
3          $i = 0;
4          do
5              {
6                  $i++;
7                  echo "Hellow while $i times" . "<br>";
8              }while ($i <= 5 );
9      ?>
10
11 </html>
```

## Result of Do-While loop

Hellow while 1 times  
Hellow while 2 times  
Hellow while 3 times  
Hellow while 4 times  
Hellow while 5 times  
Hellow while 6 times

## For Loop

```
php ForLoop.php
1  <html>
2      <?php
3          for($i = 1; $i <= 5; $i++) {
4              echo "PHP for loop $i times" . "<br>";
5          }
6      ?>
7  </html>
```

## Result of For Loop

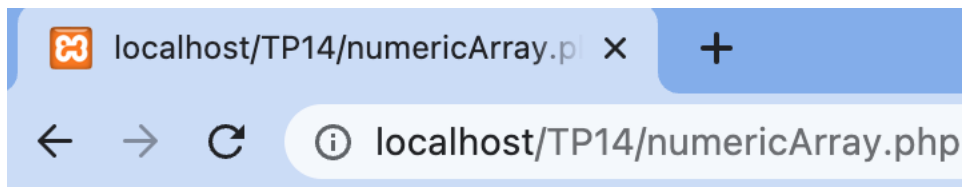

PHP for loop 1 times  
PHP for loop 2 times  
PHP for loop 3 times  
PHP for loop 4 times  
PHP for loop 5 times

## Numeric Array

```
numericArray.php
1  <html>
2      <?php
3          $age = array("Peter" => "35", "Ben" => "37", "Joe" => "43");
4
5          foreach($age as $x => $val) {
6              echo "$x = $val <br>";
7          }
8      ?>
9  </html>
```

### Result of Numeric Array

Peter = 35

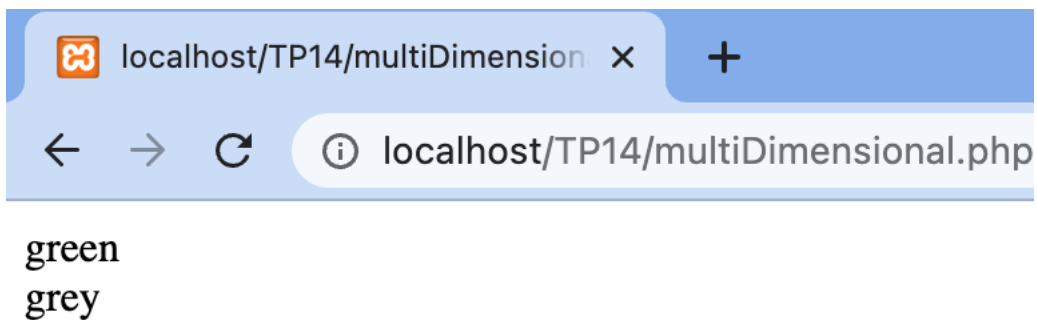

Ben = 37

Joe = 43

## Multi-dimensional Array

```
multiDimensional.php
1  <html>
2      <?php
3          $multiDArray = array(
4              "A" => array (0 => "red", 2 => "blue", 3 => "green"),
5              "B" => array (1 => "orange", 2 => "black"),
6              "C" => array (0 => "white", 4 => "purple", 8 => "grey")
7          );
8
9          echo $multiDArray["A"][3];
10         echo "<br>";
11         echo $multiDArray["C"][8];
12     ?>
13 </html>
```

### Result of Multi-Dimensional Array

localhost/TP14/multiDimensional.php

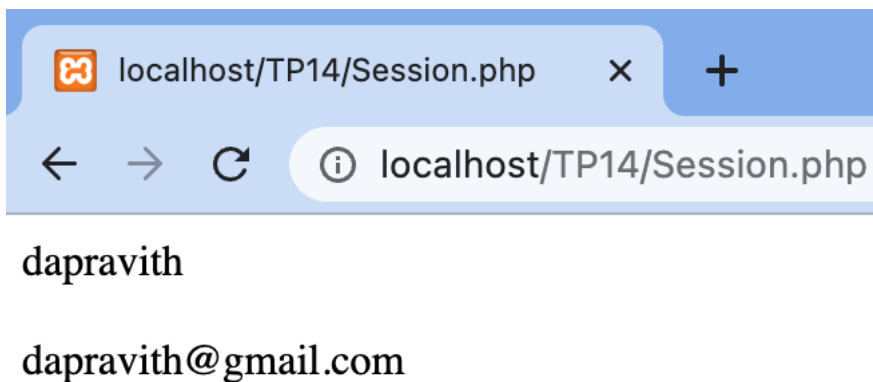

green  
grey

## Session

```
Session.php
1  <html>
2      <?php
3          session_start();
4
5          //storing session data
6          $_SESSION["username"] = "dapravith";
7          $_SESSION["email"] = "dapravith@gmail.com";
8
9          //retrieve session data
10         echo $_SESSION["username"];
11         echo "<br><br>";
12         echo $_SESSION["email"];
13     ?>
14 </html>
```

## Result of Session

## Describe directory structure of Laravel project.

The directory structure of a typical Laravel project is as follows:

1. **app:** This directory contains the core application code. It includes subdirectories such as:
  - **Console:** Contains artisan commands.
  - **Exceptions:** Holds custom exception classes.
  - **Http:** Contains controllers, middleware, and form requests.
  - **Models:** Contains the application's data models.
  - **Providers:** Contains service providers that bootstrap various application services.
2. **bootstrap:** This directory contains the application's bootstrap files and cache.
  - **app.php:** Bootstraps the Laravel framework.
  - **cache:** Holds the framework's cached files for optimized performance.
3. **config:** Contains configuration files for various parts of the Laravel application.
  - **app.php:** General application configuration.
  - **database.php:** Database connection settings.
  - **mail.php:** Email configuration.
  - **services.php:** Configuration for third-party services.
4. **database:** Contains database-related files and migrations.
  - **migrations:** Holds database migration files.
  - **seeds:** Contains seed classes for database seeding.
5. **public:** This directory contains the publicly accessible files for the application.
  - **index.php:** The entry point for the application.
  - **css, js, images:** Subdirectories for CSS, JavaScript, and image assets.
6. **resources:** Holds the application's non-PHP resources, such as views and frontend assets.
  - **views:** Contains Blade templates for generating HTML.
  - **js, css:** Directories for JavaScript and CSS assets.
  - **lang:** Contains language files for localization.

7. routes: Contains route definitions for the application.

- web.php: Defines web routes for HTTP requests.
- api.php: Defines routes for API endpoints.

8. storage: Contains files generated by the application, such as logs, cache, and uploaded files.

- app: Holds files specific to the application.
- framework: Contains framework-generated files.
- logs: Log files generated by the application.

9. tests: Holds the application's automated tests.

10. vendor: Contains the installed Composer packages.

11. file.env: This file contains environment-specific settings such as the database connection details, cache settings, and application-specific configurations.

12.artisan: This is the command-line interface for Laravel. It provides various commands for tasks like running migrations, generating code, and more.

Setup first Laravel project to say: “Hello World.”

Result after setup first Laravel Project:
